WORK EXPERIENCE

Makers(December 2022 - April 2023) - Codebar Scholar for a fully-funded intensive tech bootcamp
Full stack developer

- An intensive 16-week bootcamp covering software engineering fundamentals in Ruby and Javascript, with a strong focus on TDD and pair programming. Included a focus on building end-to-end projects, including backend, frontend and database. We used agile methodologies, did sprint planning and retros and worked on team projects.
- Ruby | MERN stack | JavaScript | PostGresSQL | Sinatra | JS | HTML | CSS | TDD | Agile methodologies | Git|

Career break   **May 2018-March 2022**
Full-time parenting
- Moved to Paris, France from October 2017-February 2019.
- Learned French up-to Intermediate level to manage day-to-day admin work.
- Hosted meetups for the English speaking expats from all across the world to come together and learn the language and meet other English speaking parents.

Technical Writer - NVISH Solutions   **December 2009 – May 2018**

- Working with Software Devs to create Request for Proposals (RFPs) for prospective clients.
- Going through web-apps to create user manuals and check spelling errors if any.
- Creating content for SEO for **Hitachi US, Sony PlayStation** new releases.
- Proof reading all the technical documentation before sending it over to clients.
- Created content for **Hitachi US** mobile website.

EDUCATION

Chandigarh Engineering College   **July 2005-June 2009**
BTech in Computer Science

PROJECTS

Recipe Generator
- MVP - You can get a list of recipes by selecting the ingredients lying in your fridge/cupboard.
- Additional features - Signup, sign in, sign out, create new recipe, save recipes, profile page
- Built using MERN stack, and Tailwind CSS. Thorough TDD by using JEST in the backend and Cypress in the frontend

BURNBook
- Web app using MERN stack, Postman, and Tailwind CSS.
- Users can post content (images -using Multer and text) and view it in a feed, like and unlike posts, time and date published on every post. Create an account, log in.
- TDD using cypress JS and Jest.

[Chitter](#)

- Clean, simple web applications using Sinatra, RSpec, HTML and ERB.
- Users can view, post and delete messages.
- Sessions for login and logout functionality.
- I also built the same app UI in pure Javascript (JS) and HTML.

MakersBnB

- Web app to create an account, list your space and book available spaces in Ruby using Sinatra web framework
- Worked on a feature to reserve the space based on the availability
